Quick Turn - Guidelines and Limitations

	Type A 4 working days	Type B 6 working days	Type C 8 working days	Type D 5 working days	Type E 8 working days
Quantity	Maximum 20 Print Pieces			Maximum 50 Print Pieces	
	Total quantity of parts produced is dependent on final part size and by how many parts can fit on each print piece. Sytek will confirm.				
Artwork	eps files (encapsulated postscript) are preferred. If this is not available, then any vector-formatted file with fonts as outlines may be acceptable. Also required is a colour pdf file for quality control purposes. Sytek will determine the "useability" of your file upon receipt.	As "A" (4 day), with Sytek creating or modifying artwork using nearest similar fonts. Sytek will determine if provided "logos" are printable.	As "B" (6 day), with Sytek creating or modifying logos.	Existing artwork with no changes.	
Material	Up to 50 different stocked materials.				
	Full coverage adhesive		Full or selective adh.	Full coverage adh.	Full or selective adh.
Colours	No selective texture print		Selective texture	No selective texture	Selective texture
	<ul style="list-style-type: none"> The majority of this service utilizes digital printing technology that has limitations in its ability to exactly match some colours. (Pantone, transparent, and some spot colours with specific colour values.) Sytek will provide product on a "best efforts", closest match basis. Metallic colours must be screen printed and may delay the lead times posted and/or require some artwork modifications. For work where tooling does not exist and a lazer is used for final sizing, edges of light colours may show slight signs of minor heat discolouration. 				
Other Considerations	<ul style="list-style-type: none"> It is not recommended that a digitally printed product replace higher volume, screen printed products where first articles, lifecycle tests or adhesive bonding evaluation is required or has been performed. Sytek requires that customers requesting an "emergency run" have assessed that tests, approved using screened products, are not jeopardized by requesting a "quick fix" digitally printed product as above. CSA and UL labels require screened inks. This service may not be used for this reason. We recommend this process not be used with a membrane switch application as it may yield a shorter life than with conventional screened products. Lead time for products which require other processes (such as serializing, embossing or subcontracted work) will be confirmed on an individual basis. Account must be in good standing. 				
Shipping Guarantee	Sytek guarantees shipment on the day specified – starting the day after receipt of the latter of: art and colour details, dimensions, required material, deposit (if required), contact for approvals or questions. In addition, types "B" and "C" require art approval within 24 hours of submission.				
Terms & Conditions	As posted on: www.sytek-ent.com/customer-corner/index.htm
